

### BIPOLAR RADIOFREQUENCY

The skin, heated just right, produces new collagen and immediately appears firmer, more compact and younger.

### VACUUM ASPIRATION ENDODERMIC MASSAGE

Vacuum technology lifts, bends and compresses the skin to increase local blood circulation and stimulate lymphatic drainage.

### LLLT LASER

The LLLT laser, integrated in all body handpieces, directly irradiating the adipose tissue, reshaping the body.

### NEW! THE SPHERE HANDPIECE

The massage activated by the rotation of the spheres acts directly on the tissues to guarantee a deep treatment whose degree of power is greater depending on the areas and imperfections to be treated: it resolves annoying imperfections, such as cellulite, and simultaneously works on the deep muscles, also eliminating pain from muscular contractures.

### NEW! MESOPORATION

A new, state-of-the-art function that promotes deep absorption of the cosmetics used during the session.
